

Design, Construction and Analysis of (Cont.)

SOV/2095

The geometric basis of design of toothed reducers and the general theory of out-of-centrode involute gearing are presented, and the selection of geometric parameters for gear trains of planetary speed reducers is discussed.

Pyatnitskiy, A.A., Weight Characteristics of Toothed Gears and Gear Trains 67

The author derives equations for coefficients which can be used as criteria for "Weight quality" of gears and gear trains. He also compares steel gears with nonmetallic ones, and straight-tooth gears with gears with helical teeth.

Zablonskiy, K.I. Investigation of Load Concentration Along Tooth Bearings of Gears 77

The essentials of tooth loading, deformation, and design are analyzed. The author concludes that in order to obtain a correct solution for load concentration, the local rigidity of teeth should be considered.

Beloborodov, V.A. The Problem of Developing Mechanical Marine Transmissions 87

The use of gear trains in marine drives is discussed, and the construction of a reversible speed reducer is described.

Card 4/8

Design, Construction and Analysis of (Cont.)

SOV/2095

Bolotovskiy, I.A., Rational Selection of Displacement Coefficients and Distribution of Displacements Between Gears at Angular Correction With the Use of Limiting-contour Diagrams

95

The article discusses correction of involute gears by displacing the profile (angular correction) for obtaining the maximum contact strength, bending strength, and wear resistance with the aid of limiting-contour diagrams.

Smirnov, V.E. Limiting-contour Diagrams and Methods of Their Construction. Change in Contour Form Due to a Change in Certain Geometrical Parameters Components of nonlimiting-contour diagrams, such as interference, overlapping coefficient, radial clearance, and changes of tooth height, and corner radii of the hob tooth are discussed.

103

Belyanin, A.I. Investigation of the Load Capacity of Helical Gears

111

Theoretical investigation, and data from experiments show that the load capacity of helical gears can be 50 percent greater than that of straight gears.

Card 5/8

Design, Construction and Analysis of (Cont.)

SOV/2095

Krivenko, I.S. Basic Results of a Theoretical and Experimental Investigation of New Types of Worm Gear Trains

119

The use of worms with concave profiles is discussed. The results of the investigation show the advantages of worm gears of this type.

Pedyakin, R.V. M.L. Novikov's Gearing System

129

A brief synopsis of Novikov's system of gearing for spur gears, including construction of profiles for concave and convex teeth, is presented. The author claims that this system has a load capacity 2 to 3 times greater than standard involute gearing systems. He further states that this fact has been confirmed by exhaustive tests at various plants.

Solov'yev, A.I. Theoretical Fundamentals of the Friction Analysis of Automobile Transmissions and Experimental Methods of Investigating Friction in Automobile Mechanisms

141

The efficiency of gearings, universals and the whole transmission is analyzed. Friction in roller contact bearings and in the differential, friction losses in the transmission during unsteady motion, and experimental methods of investigating friction losses in automobile mechanisms are discussed.

153

Tsfas, B.S. Design for Strength of a Solid Toothed Gear, Weakened by Key or Spline Slots

163

Formulas are derived for forces and moments acting on sections of a gear weakened by spline (6 slots) and key (one slot) joints.

Blokh, O.T. Increase in the Accuracy of Kinematic Worm Gear Trains Used for Reading Mechanisms of Instruments

177

The author analyzes the accuracy of cylindrical worms and wheels for high-precision instruments. He makes recommendations for reducing the margin of error in the gear trains in order to reduce the total margin of error of the mechanism.

Belyayev, M.S., and K. I. Zablonskiy. Consideration of Simultaneous Engagement of Two Pairs of Teeth in Gearing Design

187

Card 7/8

Design, Construction and Analysis of (Cont.)

30V/2095

The distribution of load between two pairs of meshing teeth is basically determined by the rigidity of teeth and by the errors in engagement, chiefly the accumulated error of the circular pitch, causing the cyclic character of stresses. The author states that for a pair of gears of a given type the characteristic diagram for distribution of errors can be determined. He further states that this determination has been confirmed by inspection of several lots of gears manufactured by different methods.

Resolution of the Conference on the Problems of Design, Construction, and Analysis of Transmissions

195

The resolution stresses both the progress made and the deficiencies noted in design, construction, and manufacture of gearings and worm gear trains, and in the fields of continuous speed control, chain drives, and flexible shafts.

Abstract : According to the studies of Karroll, Longli and Ro, (J. Biol. Chem., 1956, 220, 583), in glycogen determination in an alkaline hydrolysate along with glycogen there also is present a non-glycogen substance of the nature of a glycode. When (in the presence of KOH and boiling) hydrolysis was continued for 2 more hours, complete decomposition occurred. Presence of protein fragments and of other matter in the muscle hydrolysate did not prevent complete decomposition. Following a 2-

5451. THE EFFECT OF PREINCUBATION ON THE INCORPORATION OF 35 S-METHIONINE INTO THE ISOLATED RAT DIAPHRAGM - Zik R. and Babický A. Inst. of Physiol., Czechoslovak Acad. of Sci., Prague - PHYSIOL. BOHEM. 1959, 2/1 (1-7) Tables 3

Preincubation of the isolated rat diaphragm for 15 min. reduced the incorporation of 35 S-methionine during the subsequent 150 min. incubation by 30%; 30 min. preincubation reduced it by 40%. The decrease in incorporation into the diaphragm preincubated for 15 min. in a medium containing 35 S-methionine and then transferred to a fresh medium of the same radioactivity was the same as in the preceding experiment, in which the preincubation medium was not radioactive. Specific activity of diaphragm incubated in one medium, to which 35 S-methionine was not added until after 15 min. preincubation, was the same as that of control tissue which was not preincubated. The effect of preincubation is not manifested if the medium contains 0.1% free amino-acids.

4079. KINETICS OF INCORPORATION OF LABELLED AMINO-ACIDS INTO MUSCLE TISSUE IN VITRO - Kinetik der Inkorporation markierter Aminosäure in das Muskelgewebe in vitro - Žák R., Babický A. and Veres K. Physiol. Inst. und Radiol. Abt., Biol. Inst., Tschechosl. Akad. der Wissensch., Prag - BIOCHEM. Z. 1959, 331/2 (117-126) Graphs 4 Tables 2

Maximum activity of rat diaphragm after administration of methionine- S^{35} is reached during the first stage of incorporation. During the second stage a plateau is reached. Addition of new methionine- S^{35} results in a new increase of protein incorporation. Methionine- S^{35} incorporated during the first stage can be released by incubation with unlabelled methionine. During the first 6 hr. of incubation the incorporation of methionine- S^{35} is linear, as is that of glycine- C^{14} and alanine- C^{14} .

 nu. The technique of the measurement of plasma volume
 ČAS. LÉK. ČES. 1957, 96/15 (457-462) Tables 2

In both Czech and foreign literature, the above method is worked out for plasma. Since this latter fluid is often turbid, we have used serum. Instead of a complicated standard curve, we have worked out a standard serum value, so that concentration in this standard would be approximately that expected in the coloured sample (diluted by about 2500 ml. of plasma). We have determined that the optimal priming dose is 20 mg. of Evans blue. The optimal conditions are to administer the dye in known concentration. In diluting blood we always use physiological saline to prevent haemolysis. We calculate the expected blood and plasma volume according to the height of the subject, which we feel is the best method. This system of calculation is very simple and permits the estimation of blood volume almost as soon as the samples are read off in the colorimeter. According to the presented results it would appear that the method of Gibson and Evans, with our modifications, give sufficiently accurate results for clinical use. The method is simple and can be carried out in any department possessing a photocolormeter.

Title : Calculation of transformer impedance for determining the resistance of grounded neutral

Periodical : Elektrichestvo, 10, 49-52, 0 1955

Abstract : The authors study the problem of influence of resistance and reactance of transformers of up to 1000-kva capacity with secondary windings 380/220 and 220/127 v. and a star-star connection upon the impedance of the neutral grounding. The study is important for the problem of disconnecting a faulty sector. The authors present a method of calculating the current of a single-phase short-circuit allowing for transformer impedances. For practical purposes they present a simplified

TITLE: Investigation of the effect of sonic and ultrasonic fields on biochemical processes.
IX. Effect on some blood components in men working under noisy conditions

SOURCE: Acta physiologica polonica, v. 16, no. 5, 1965, 727-737

TOPIC TAGS: human physiology, working condition, man, medical experiment, biologic
vibration effect, sound, ultrasonic field, acoustic biologic effect.

ABSTRACT: The levels of blood glucose, pyruvic acid, ascorbic acid, proteins, protein
fractions, nonprotein nitrogen, phospholipid phosphorus, and the activities of aminotrans-
ferase and aldolase were determined in 80 persons to study the effect of noisy working condi-
tions on the workingman. The test subjects were employed in a large industrial establishment.

Card 1/2

L 6536-66

ACC NR: AP5027168

and exposed to vibration and noise. All were in relatively good health. The control group consisted of workers in the same factory, but not exposed to a noisy environment. The results showed the following: a decrease in blood sugar, phospholipid phosphorus, and ascorbic acid; an increase in protein, albumin, and nonprotein nitrogen. The gamma globulin, however, showed a decrease. There was a slight increase in aspartic aminotransferase and alanine aminotransferase, and a slight decrease in aldolases. The results of determinations of other components studied, different from those in guinea pigs, are discussed. Orig. art. has: 9 tables.

Title : An Investigation of the Possibility of Perfecting the Process of Electrolytic Chrome Plating. Ch. II.

Orig Pub : Frace Inst. mech., 1957 (1958), 7, No 22, 41-44.

Abstract : By a method described earlier (RZhKhim, 1957, 64027) the operation of a self-regulating bath (SB) for chrome plating, which contains 400 g/l of CrO_3 (I), was studied. An increase of the concentration of I permits obtaining good protective-decorative coverings at lower temperature and D. The SB plating method is equivalent to the usual bath plating method at an I concentration of 275 g/l; at a higher concentration of I, SB works better.

TITLE: Bright ²⁷gold ¹⁶plating in an acid electrolyte

SOURCE: Warsaw, Instytut Mechaniki Precyzyjnej. Prace, v. 13, no. 2(48), 1965, 1-8

TOPIC TAGS: nickel, cobalt, metal plating, electrolyte, ~~gold plating~~, 6040

ABSTRACT: The effect of citric acid, nickel, and cobalt ions on the formation of bright coatings has been investigated. The investigation was based on a hypothesis of the existence of two kinds of brighteners. The polarization, current efficiency, and brightness of coatings in various concentrations of citric acid, nickel, and cobalt salts made it possible to select optimum conditions for bright gold plating. focus. In the tumor tissue, along with previous nerve formations regenerating nerve formations are observed. It is stressed that on all levels of the esophagus a tremendous number of viable nerve cells and fibers are preserved. The observed changes are regarded by the author as reflex trophic disturbances. -- Ye.A. Skvirs-kaya

TITLE: Gas-turbine stator for a supplementary air passage. CZ Pat.
No. PV 931-65

SOURCE: Vynalezky, no. 11, 1965, 23

TOPIC TAGS: air breathing engine, turbine stator, jet engine

ABSTRACT: An Author Certificate has been issued for a jet-engine gas-turbine stator with a special rim fastened to the casing. The rim serves as the outer surface of the turbine passage. It consists of segments fitted together with lugs which fit into the corresponding grooves of the next segment. The overlapping ends of the segments are covered by a strip. Transverse motion of the segments is actuated by guide clevises that are engaged with the corresponding ribs on segments. The ribs have holes admitting air into the space between the casing and the rim as well as into the passage through a slot in the stator flange. [KP]

TITLE: Bone tissue sterilization¹⁹ using reactor fuel gamma radiation

SOURCE: Nukleonika, v. 10, no. 12, 1965, 791-806

TOPIC TAGS: bone, nuclear fuel, gamma radiation, radiation biologic effect,
radiotherapy

ABSTRACT: An absolute ionization method of measurements of doses absorbed in bone
tissue, and additional methods were developed. Measurements of spatial dose distri-
bution in grafts were performed. From the detailed analysis it follows that each
point of the graft absorbs in sterilization a dose of 3.3 Mrad, with an accuracy of
20%. In the two years of its application the sterilization method developed has
proved satisfactory. This was evidenced in sterilization of more than one hundred
lyophilized human bone grafts successfully used for therapeutical purposes. The
authors thank Professor K. Ostrowski for his suggestion to use the facilities of the
ENIA reactor for bone tissue sterilization, and also for his valuable comments. The
authors also thank Mr. J. Aleksandrowicz for over-all assistance in the project, Docent
Z. Zagorski for discussion on the subject of chemical dosimeters and Mr. T. Berens for
designing the containers, and general help. Orig. art. has: 12 figures and 14 formulas.
